

STEVEN LIU

Software Engineer | Full Stack Developer

Ontario, CA | (626)-404-3359 | stevenlaoliu@gmail.com | [LinkedIn](#) | [Github](#)

EDUCATION

California State University, Fullerton
Bachelor of Science in Computer Science

Fullerton, CA

SKILLS

Operating Systems: Windows, Linux

Programming Languages: Python, HTML, CSS, JavaScript, C++, TypeScript, Java, SQL

Tools and Frameworks: SvelteKit, Flask, Git/Github, APIs, Firebase, React

WORK EXPERIENCE

Sunright Tea Studio

Eastvale, CA

Supervisor

June 2022 - Present

- Managed and coordinated daily operations, boosting work efficiency by 20% while identifying and addressing problems to ensure a smooth workflow and overall performance.
- Optimized the POS and kiosk system, reducing downtime by 30% through active troubleshooting and clearly communicating technical concerns to customers to enhance user satisfaction.
- Performed maintenance and troubleshooting on printers and kiosks to ensure smooth performance and minimize operational issues.

Best Buy - Seasonal Warehouse Merchandise Processor

Chino, CA

Seasonal Merchandise Processor

November 2024 - January 2025

- Achieved 90%- 95% of merchandise processing goals per shift, ensuring operational efficiency and timely task completion.
- Conducted thorough quality checks to verify that products met company standards and policies, while categorizing them as excellent condition, defective, or fraudulent.
- Utilized internal processing systems to document findings, review sale listings, and maintain accurate inventory records.

PROJECTS

Flex Scheduler

October 2025 - January 2026

- Developed a web application scheduling system to help users manage shift assignments, employee availability, and internal communication more efficiently.
- Focused on implementing core features like set roles, chat system, tasks/shift reminders, and other functional features for all users to better interact with each other and increase productivity.

Door Automation System

July 2025- September 2025

- Developed a door lock monitoring system using Python, Raspberry Pi, and a rotary encoder to detect physical lock and unlock actions on a door for extra security.
- Designed a notifications feature using Discord API to send door lock status to users and created commands for users to change or check the door lock.

SymptoQuest

January 2024 - August 2024

- An AI web application to create a simple tool for users to evaluate and identify symptoms before consulting with a doctor.
- Utilized SvelteKit, Firebase, OpenAI API, and Google Maps API to design and implement features, enhancing user experience to improve overall functionality.
- Managed project tasks and delegated responsibilities to peers working on the project to ensure positive productivity.

Chat System

August 2023 - December 2023

- Constructed a one-to-one and one-to-many chat system by utilizing Python, leveraging socket programming and multithreading to enable real-time communication.
- Implemented TCP for reliable data transmission and optimized the system for efficient handling by developing the client and server sides.
